GENERAL TRADING

POLYMERS

Sahar Express is a privately owned company specializing in Commodity Chemicals, Petro-Chemicals, Specialty chemicals, and Mineral products. We make sure that we satisfy our partners, every time with our quality products, timely delivery, precise communication & professional approach. As a worldwide supplier, we offer our products to more than 16 countries. We are committed to our partners' needs and believe in developing a heartfelt bond through constant communication.

HDPE

High Density Poly Ethylene is a thermoplastic polymer made from petroleum. As one of the most versatile plastic materials around, HDPE plastic is used in a wide variety of applications, including plastic bottles, milk jugs, shampoo bottles, bleach bottles, cutting boards, and piping. Known for its outstanding tensile strength and large strength-to-density ratio, HDPE plastic has a high-impact resistance and melting point.

LDPE

low density polyethylene is a soft, flexible, lightweight plastic material. LDPE is noted for its low temperature flexibility, toughness, and corrosion resistance. It is not suited for applications where stiffness, high temperature resistance and structural strength are required. It is often used for orthotics and prosthetics. LDPE has good chemical and impact resistance and is easy to fabricate and form.

LLDPE

Linear low-density polyethylene (LLDPE) is used in films and packaging due to its flexibility and toughness. High-density polyethylene (HDPE) is typically translucent and less flexible than LDPE. Due to its higher crystallinity, it has better chemical resistance, stiffness, and strength than LDPE.

PVC

Polyvinyl chloride is an amorphous thermoplastic material. It is hard and brittle, white in color and only becomes softer, malleable and suitable for technical applications when plasticizers and stabilizers are added. PVC is best known for its use in floor coverings. It also plays an important role in the construction industry, where it is used in the form of window profiles and pipes, among other things.

K67	Extrusion Moulding	-	490-550	25 kg bag

PP

Polypropylene is a thermoplastic produced by chain polymerisation of propene. It belongs to the group of polyolefins, is partially crystalline and non-polar. Its properties are similar to polyethylene, but it is slightly harder and more heat resistant.

PET-BG

Polyethylene Terephthalate bottle grade chips (highly viscous) is a condensation polymer produced by a continuous meltphase polymerization process followed by a solid state polymerization process ,with an I.V of 0.75-0.85 . The products has an excellent transparency and gloss ,an outstanding gas barrier against oxygene and carbon dioxide,and outstanding toughness and impact strength.

HIPS

High Impact Polystyrene, also known as PS (Polystyrene), is an amorphous thermoplastic material, used in lower heat applications. This form of PS typically is produced by adding around 5-10% rubber or butadiene copolymer. This increases the toughness and impact strength of the polymer and results in a very stiff product ideal for packaging applications.

GRADES	APPLICATION	MFR	DENSITY	Packing
7240	TV, radio and cassette player cases	4.5	-	25 kg bag

ABS

Acrylonitrile Butadiene Styrene (ABS) is an impact-resistant engineering thermoplastic & amorphous polymer. It is made of three monomers: acrylonitrile, butadiene and styrene. It is a preferred choice for structural applications, thanks to its physical properties such as high rigidity, resistance to impact, abrasion, strain. It finds use in electronic housings, auto parts, consumer products, pipe fittings, lego toys.
